DESCO EUROPE

CREATE AN ESD FLOOR WITH THE STATGUARD® FLOOR MAINTENANCE RANGE

Enhance electrical properties of ESD floor

Improve visual characteristics of ESD floor

Reduce on-going maintenance costs and save labour time

Maintain electrical properties of ESD floor

4 Steps to ESD Floor Maintenance

STATGUARD FLOORING

1 Low Residue Floor Stripper

Removes multiple layers of dissipative finish with a mild pH, non-ammoniated formula. Prepares the floor by lifting buildup while leaving minimal residue for clean, effective reapplication.

2 Floor Neutraliser

Eliminates alkaline residue from strippers and restores to a neutral pH level of 7.0 before applying a new finish. This ensures proper finish adhesion and consistent ESD conductivity.

3 Dissipative Floor Finish

Converts non-ESD floors into ESD-safe surfaces and protects permanent flooring like vinyl, VCT, and rubber. The Low-VOC option is ideal for cleanrooms or environmentally sensitive areas.

4 ESD Floor Cleaner

Cleans and maintains ESD-treated floors without leaving conductive residue. Regular use prevents static buildup and preserves long-term ESD performance.
